

Verity 340B™ Purchase Analytics*

Verity 340B™ Purchase Analytics identifies the optimal NDC mix for significant savings opportunities. By pro-actively monitoring and analyzing NDC opportunities, Purchase Analytics delivers dynamic insight into your data. Your procurement and purchasing team is able to make quick and data-driven purchasing decisions creating an average savings of 10-13% of total drug spend.

- Enhances any existing 340B Program, regardless of which Third Party Administrator you use
- Rapid Implementation
- No Staff resources require to implement or operate, Verity experts manage the program for you
- Cloud-based - no software to download or maintain
- Built-in business rules and price trends
- Complimentary spend analysis - try before you buy

Factors reviewed on **OVER 100,000 NDC's** Quarterly:

- GPO and 340B Pricing
- Utilization by Purchase Category
- Wholesaler Availability of Stock
- New Generics
- New Brand Name Drugs

WHICH DRUG WOULD YOU BUY?

Statistic	GPO	340B	Overall Calculation
Drug Utilization	60%	40%	
Drug Cost A	\$1.00	\$0.90	.96
Drug Cost B	\$1.05	\$0.75	.93

Calculation Footnote:
 Drug A = (.60) 1.00 + (.40) 0.90 = .60 + .36 = .96
 Drug B = (.60) 1.05 + (.40) 0.75 = .63 + .30 = .93

RESULT:
 Based only on GPO price, you would pick **DRUG A**

Based on price and utilization, you would pick **DRUG B**

Without an automated solution, hospitals miss 66.5% of savings opportunities.
