Verity 340B® Purchase Analytics*

Verity 340B® Purchase Analytics identifies the optimal NDC mix for significant savings opportunities. By pro-actively analyzing each NDC drug price and your pharmacy spend data, Purchase Analytics delivers dynamic insight into your data. Your procurement and purchasing team is able to make quick and data-driven purchasing decisions creating an **average savings of 10-13% of total drug spend**.

- Enhances any existing 340B Program, regardless of which Third Party Administrator or wholesaler you use

- Rapid Implementation

- No Staff resources require to implement or operate, Verity experts manage the program for you

- Cloud-based - no software to download or maintain

- Built-in business rules and price trends

- Complimentary spend analysis uses your actual purchase history so you can see the savings potential before you buy.

WHICH DRUG WOULD YOU BUY?

Generic Equivalent Groupings

Statistic	340B	GPO	WAC	Blended Price**
Drug Utilization	70%	20%	10%	
NDC #12345	$90	$100	$101	$93
NDC #67890	$80	$95	$110	$86
NDC #98765	$60	$97	$116	$73

RESULT: Based only on GPO price, you would pick **NDC 67890**

Based on the Blended Price, you should pick **NDC 98765**

Without evaluating GPO and 340B prices by utilization, hospitals purchase more expensive medication options 66.5% of the time.
